

Here is an update - 7 February 2008 - on the perceived state of our planet's climate:

<http://news.bbc.co.uk/1/hi/sci/tech/7227080.stm>

"Our findings suggest that a variety of tipping elements could reach their critical point within this century under human-induced climate change," said Professor Tim Lenton from the University of East Anglia, the lead researcher on the study.

<http://news.bbc.co.uk/1/hi/sci/tech/7227585.stm> Calls for climate change minister.

"Overall, the Government has failed to match its 1997 commitment to increase the use of green taxes"

John McFall, Treasury Committee chairman.

Here is an update - 7 February 2008 - on the true state of our planet's climate:

<http://www.cato.org/pubs/pas/html/pa-609/pa-609index.htm>

Like all estimates of the impacts of climate change, the FTA's analyses are plagued with uncertainties resulting from the fact that such estimates are derived using a series of linked models with the uncertain output of each model serving as the input for the next model. *To compound matters, each model is necessarily a simplified representation of reality. The results of impact assessments are subject to potentially large systematic errors which tend to substantially overstate negative impacts.*

<http://www.eurotrib.com/story/2008/1/23/12131/3091>

The present alarm on climate change is an instrument of social control, a pretext for major businesses and political battle. It became an ideology, which is concerning. The last scientific report from the IPCC refers, for instance, that in Antarctica the temperature rise preceded the rise in carbon dioxide emissions, but that is omitted in the report for policy makers.

Greenland Ice Extent at unprecedented levels and winter still has 2 months to go:
