Subject: Time to lead

Giddy Malcolm,

Per the recent comments by YOUR senate leader Nick Minchin:

"We are serious about our views on the Bill, that it is seriously flawed and quite damaging in its current form and it needs substantial amendment," he said. "We will be crafting and, with party room support, putting to Government a range of amendments we believe are needed for the Bill and by definition if the Government rejects those amendments, you should expect we would have no choice but to vote against the Bill."

Malcolm YOU are the leader. Get out in FRONT and lead or GET OUT OF THE WAY.

There is no room for negotiation on the ETS bill. You must understand that the way forward is to oppose this bill in its entirety.

1. There is no scientific LAW that determines unequivocally that human induced CO2 contributes to Anthropogenic Global Warming.
2. Anthropogenic Global Warming is a THEORY and not a particularly good one at that.
3. Australia needs you to show some sense. DESTROY this bill.

Political science is about compromise. Not on this issue. Not now, not ever.

Have you done your due diligence for Australia?

regards,

A B
