

IS IT NOT TRUE?

13 May 2008

Is it not true, that one of the arguments of CO₂ MMGWCC cultists, is that CO₂ inspired surface warming leads to more water vapor “feedback” which being a well known greenhouse gas (the ultimate GHG) causes more warming; but remember it was the CO₂ that was the culprit that started it.

If that is the case, then the Cultists and their regulatory minions can hardly excuse water vapor as not being equally guilty of “environmental pollution”.

One would therefore think that the Supreme Court’s admonition to the EPA that they are authorised to control GHGs and therefore MUST control them; should apply to water vapor as well; perhaps even more so, since there are few who don’t consider H₂O as being the most prevalent GHG.

Perhaps then it is time to get on the EPA’s case, and require them to also limit H₂O effluent emissions, from both modern automobiles, and also the Hydrogen cars of the future.

I have to confess that I am not a CO₂ sequestration fan; even if the coal technology of the future leans in that direction; because permanent CO₂ sequestration also means permanent OXYGEN sequestration, which I don’t think is a great idea.

Now carbon sequestration I am all in favor of, but not in a form that takes oxygen with it. A future benefit of carbon sequestration, is that we will know where to go mine that “fossil fuel” in the future, when we come to our senses, and realize that carbon is not our enemy; but a valuable source of chemical energy.

Cap and trade sounds to me not unlike the derelict with his swag over his shoulder, that the gentleman picked up with his horse drawn carriage. The bum doesn’t want to put his sack down on the floor, because he feels the poor horse already has enough burden just carrying him as extra load.

The way things are going, if we can’t turn this train wreck around; the pied Piper of Tennessee, may go down in history as the person who almost single-handedly was responsible for the deaths of more innocent people all over the world; than any other tyrant in history.

George

PS: As if we don’t have enough problems already; the Swiss are pushing through regulations granting “rights” to plants; (hear the asparagus screaming). Supposedly eating corn (that was rejected as not up to ethanol standards) would be alright; but picking the petals or “decapitating” a rose (yes they used that term) would be criminal. Which is why I believe that intelligence is just Nature’s most recent experiment in survival; and so far it doesn’t look like a good recipe; compared to just being big and mean and ugly like the dinosaurs; which lasted for 140 million years. So don’t look for intelligent life somewhere else; it looks like a failed survival scheme!
