

Climate change and its consequences – an African perspective

W.J.R. ALEXANDER

Children of Africa on their way to school.

Our objective should be the improvement of the quality of life of the millions of poor and disadvantaged people of Africa, not the imposition of costly and fruitless measures to combat climate change for which there is no scientifically believable evidence.

TECHNICAL REPORT

Climate change and its consequences – an African perspective

W.J.R. Alexander

Professor Emeritus, Department of Civil Engineering, University of Pretoria

Honorary Fellow, South African Institution of Civil Engineering

Member, United Nations Scientific and Technical Committee

on Natural Disasters, 1994 - 2000

Email: alexwjr@iafrica.com

June 2006

This report is my independent contribution to the current climate change debate. The purpose is to provide linkages between climatic processes and hydrometeorological responses. This is required for the reconciliation of climate change theory with observational deductions derived from extensive studies of a comprehensive South African database.

The report also provides a sounder numerical basis for future climate-related research than is currently available.

I have neither requested nor received any financial or other material support from any source in connection with these studies.

It is recommended that this report be reproduced and widely distributed for educational purposes as well as for the information of practitioners and political decision makers.

Table of contents

Chapter 1	Introduction
Chapter 2	Basics of hydroclimatology
Chapter 3	Climate prediction model
Chapter 4	Climate and solar activity
Chapter 5	Climate and rainfall
Chapter 6	Climate and river flow
Chapter 7	Climate, droughts and water resources
Chapter 8	Climate and floods
Chapter 9	Climate and natural disasters
Chapter 10	Climate, the natural environment and agriculture
Chapter 11	Conclusions and recommendations

Appendices

A	Declaration on science and the use of scientific knowledge (1999)
B	Commission of Enquiry into Water Matters (1970)
C	Long range prediction of river flow (1978)
D	Floods, droughts and climate change (1995)
E	Development of a climate prediction model (2005)
F	Cycles of drought and good seasons (1889)
G	Flood alerts (2005/06)
H	Data files (2001)

PowerPoint presentations

Climate change – in search of the truth:

Truth Part 1	The evidence
Truth Part 2	Solar linkage
Truth Part 3	Prediction model
Truth Part 4	Water resources
Truth Part 5	Natural disasters
Truth Part 6	Environmental concerns
Truth Part 7	Northern hemisphere nonsense
